Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3

1 2 3

4 5 6

7 8 9

Output: Sum of the main diagonal: 15

Sum of the secondary diagonal: 15

Answer

// You are using Java

```
import java.util.*;
```

```
class sample{
    public static void main(String[]arg) {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int[][] a = new int[n][n];
        for(int i = 0 ; i<n ; i++) {
            for(int j = 0; j<n ; j++) {
                a[i][j] = sc.nextInt();
            }
        }
        int sum = 0, sum1 = 0;

        for(int i = 0; i<n; i++) {
            for(int j = 0; j<n; j++) {
                if(i == j) {
```

```
        sum+=a[i][j];  
    } else {  
        continue;  
    }  
}  
}
```

```
for(int i = 0; i<n; i++) {  
    sum1+=a[i][n-1-i];  
}  
System.out.println("Sum of the main diagonal: "+ sum);  
System.out.println("Sum of the secondary diagonal: "+ sum1);  
sc.close();  
}  
}
```

Status : Correct

Marks : 10/10
