Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

Input Format

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

Output Format

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

Answer

```
// You are using Java
import java.util.*;

class sample{
    public static void main(String[]args) {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int m = sc.nextInt();

        int[][] a1 = new int[n][m];
        int[][] a2 = new int[n][m];

        for(int i = 0 ; i<n; i++) {
            for(int j = 0; j<m; j++) {
                a1[i][j] = sc.nextInt();
            }
        }
    }
}
```

```
for(int i = 0 ; i<n; i++) {  
    for(int j = 0; j<m; j++) {  
        a2[i][j] = sc.nextInt();  
    }  
}  
  
int[][] sum = new int[n][m];  
  
for(int i = 0 ; i<n; i++) {  
    for(int j = 0; j<m ; j++) {  
        sum[i][j] = a1[i][j] + a2[i][j];  
    }  
}  
  
for(int i = 0; i<n; i++) {  
    for(int j = 0 ; j<m; j++) {  
        System.out.print(sum[i][j] + " ");  
    }  
    System.out.println();  
}  
sc.close();  
}  
}
```

Status : Correct

Marks : 10/10
